

IT Security & Password Management Policy

Corporate Governance & Technical Compliance Standard

POL-IT-001

Effective Date:	[Effective Date]	Approved By:	Information Security Board
Version:	3.2	Target Audience:	All Employees & Contractors

1. PURPOSE & SCOPE

This policy outlines mandatory requirements for creating, protecting, and resetting credentials used to access corporate devices, networks, and cloud services. Strict adherence protects company data against unauthorized access and cyber threats.

2. PASSWORD COMPLEXITY REQUIREMENTS

All user passwords across enterprise infrastructure must adhere to the following baseline technical controls:

- Minimum Length:** At least 14 characters in length.
- Character Variety:** Must include uppercase letters, lowercase letters, numbers, and special characters (!@#\$%^&*).
- History Ban:** System prevents reuse of the last 10 previous passwords.
- Prohibited Terms:** Passwords must not contain user login names, dictionary words, or corporate brand terms.

3. PASSWORD RESET & VERIFICATION PROTOCOLS

Self-service password resets via Single Sign-On (SSO) are required whenever available. In cases where manual IT Service Desk intervention is needed, the following verification steps apply:

Mandatory Identity Verification: Service Desk personnel will never reset a password via phone or email without verifying identity through a secondary factor (Push notification via MFA App or direct manager confirmation call).

Trigger Event	Action Required	Timeframe
Forgot Password	Self-Service Portal or Manager Verification	Immediate
Suspected Compromise	Immediate Lockout & Forced Reset	Within 15 Minutes
Routine Rotation	Mandatory update for privileged account holders	Every 180 Days

4. MULTI-FACTOR AUTHENTICATION (MFA) & CREDENTIAL STORAGE

Multi-Factor Authentication (MFA) is mandatory across all enterprise resources. Passwords must never be recorded on paper, stored in clear-text files, or shared with anyone. All employees are provided access to the corporate password manager for credential storage.
